SUMMARY

Python developer with hands-on experience building AI-powered backend applications using FastAPI, Flask, and LLM APIs. Comfortable with REST API design, prompt engineering, and integrating third-party AI services (Groq, LLMs). Currently deepening expertise in AI & Data Science. Seeking a Python / AI Backend internship where I can contribute to real products and grow fast.

TECHNICAL SKILLS

Languages: Python | HTML5 | CSS3

Frameworks: FastAPI | Flask

AI / LLM: Groq API | LLM Integration | Prompt Engineering

Tools & Platforms: Git | GitHub | VS Code

Exploring: AI & Machine Learning, Data Science (Code With Harry — paid course)

EDUCATION

Diploma in Computer Science Engineering — Galgotias University, Greater Noida 2023 – 2026

EXPERIENCE

Front-End Development Intern — CodSoft July 2024

- Built and deployed web projects using HTML and CSS as part of structured internship tasks.
- Practised real-world Git version-control workflows and met structured delivery deadlines.

PROJECTS

SHL Assessment Recommender AI Bot | Python, FastAPI, Groq API, LLM, Prompt Engineering

- Built a stateless conversational AI agent via FastAPI that recommends SHL talent assessments from a structured catalog, using the Groq LLM (llama-3.3-70b) for intelligent, context-aware responses.
- Engineered a keyword-boost retrieval system to pre-filter relevant catalog entries before LLM inference, reducing token cost and improving recommendation accuracy.
- Implemented strict JSON schema enforcement and catalog URL validation to prevent LLM hallucination — every recommendation is cross-checked against real catalog data.
- Designed multi-turn conversation handling (up to 8 turns) with CORS support and Pydantic request/response models.

Jobez — Job Portal Web Application | Python, Flask, SQLite, HTML, CSS

- Built a full-stack job portal with dual-role support (candidates & employers), featuring job posting, search, and application management with a Flask backend.
- Implemented user authentication with hashed passwords, session management, and role-based access control using Flask-Login.
- Developed secure resume upload with file validation and employer-only download access, backed by a relational database managing users, jobs, and applications.

Drink Water Reminder App | Python

- Python automation tool delivering timed desktop notifications using the plyer library — demonstrates scheduling logic, OS-level integration, and background-process design.

HACKATHONS

Bharat Shiksha Hackathon — Participant 2024

- Prototyped an ed-tech concept under time-constrained conditions at a national education-focused hackathon.

ACHIEVEMENTS & INTERESTS

- State-Level Amateur Boxer** — brings strong discipline, consistency, and a competitive growth mindset to technical challenges.
- Enrolled in a structured, paid **AI & Data Science course by Code With Harry**, covering ML fundamentals and Python for data science.
- Actively building personal projects and contributing to open-source to sharpen backend and AI skills.
